

Full speed ahead with Brextor

The Brextor continues its worldwide triumphal procession in 2020. Even the COVID-19 pandemic, omnipresent in the media, can contribute to the success of the innovative Pile head working machine apparently not harming.

The success of the Brextor is no coincidence, after all it is the result of years of engineering and decades of experience. The team around CEO Alois Portmann has made a virtue of the plight of many construction companies, we remember: Until a few years ago, the iron-reinforced concrete piles had to be laboriously removed by hand. The safety risk was not insignificant, not to mention the health risk. This was definitely over with the introduction of the Brextor. The worldwide unique device revolutionised pile head processing and to this day guarantees perfect results with the highest quality in just a few minutes.

The Brextor is invaluable for many companies

This has not gone unnoticed in Switzerland either; numerous well-known construction companies such as Eberhard, Frutiger, Theler and HASTAG have already used the Brextor

in their prestige projects, including the widening of the A1 motorway in Affoltern ZH, the Wilderswil bypass, the A9 motorway near Raron or the

Glasi Quartier in Bülach. The tenor was the same everywhere: total enthusiasm. In today's world, where things can't go fast enough, the Brextor was and still is a device of almost inestimable value for construction companies.

Made in Switzerland for the world

The key figures are correspondingly impressive: The Brextor has been used on over 280 construction sites and over 100,000 piles have been processed. In total, more than 130 machines have been manufactured to date, and there is no end in sight. What many appreciate: The product

was not only developed in Switzerland, but is also manufactured here. The Brextor is sold all over the world and numerous

international patents guarantee that the market is not flooded with imitations of inferior quality. BRC Engineering AG

is not blinded by its own success and is fully committed to regional production, which is anything but a matter of course nowadays.

Full speed ahead in Zuchwil

Our example pictures show a construction site in Zuchwil SO. This major construction site requires countless pile foundations, which is why the contractor, Marti Construction SA, is using no fewer than two Brextors. Delivery took place at the beginning of October and the machines have already passed their baptism of fire. This is just one of the countless examples where the Brextor is currently in use. Swiss quality at a unique price/performance ratio is

convincing more and more companies, which is why it will continue to be called the Brextor in the future: Full speed ahead with the Brextor!
